4 Read the following text and answer the questions.

Air pollution is one of the biggest problems for people's health. Air pollution is created by airplanes, traffic, factories, and power plants. When we burn fossil fuels and use strong cleaning chemicals to clean our houses, it also creates pollution. However, there are some new and exciting ways to solve the problem of air pollution. We have learned about scrubbers and smog-free towers that help to clean gases and pollution produced by factories and industry. Another method which is becoming popular is called greening. Greening is growing a wall of plants on the side of a building.

In ancient Egypt the most important highway was the River Nile. The Egyptians traveled mostly along the river because all the major cities were along the River Nile. So boats and ships were the most important forms of transportation. Most Egyptians used a small boat called a skiff. They made this simple boat from papyrus and rope. People could travel short distances in these boats, or they could use it for fishing. They used oars to make the boats move. They made larger boats and ships from wood. These ships had a large sail to catch the wind and they used oars to move and control the direction.
